

TESTIMONIALS

Mdm Chia (90 years old) had a pacemaker installed to help with her heartbeat pacing.

However, after the surgery, Mdm Chia started to experience edema. The water retention got so severe that her chest and arms swelled up badly.

The doctor said that due to the side effects of the pacemaker, her body was not able to discharge fluid efficiently. She was given antibiotics and was required to take them until

her body is able to expel the fluid properly.

Before starting the antibiotics, she started to use BeLight. The following day, to the amazement of her doctor and family, her swelling was gone without the help of any medications.

Mdm Toh (78 years old) was experiencing numbness and tingling on her tongue, one side of her head, left arm, and foot. She was also having difficulties coordinating her movements and balancing.

Upon seeking medical attention, she was informed about the possibility of an impending stroke.

She was introduced to BeLight and started using it at least 4 times a day.

After 2 months, the numbness on her tongue, head, and limbs had receded and she had regained the ability to move properly again.

Rachel (36 years old) had been trying for another baby with her husband for the past 4 years, but they failed to conceive despite having clean bills of health.

After both of them used BeLight for 3 months, she finally got pregnant.

Rachel continued to use BeLight throughout her pregnancy. She had a smooth pregnancy with no complications, gestational diabetes, or water retention. She gained 9KG and delivered a 3.2KG baby at week 39.

She felt that BeLight helps with her postpartum recovery and will continue to use it daily.

Mdm Liu (35 years old) has been experiencing painful and extended menstruation since 2020.

Her menstruation would last for around 14 days with discharges that looked like pork liver. She had to rely on painkillers to cope with the intense pain.

Sometimes, the pain is so unbearable that she has to go for IV drips, which cost her RM550 each time. She will experience severe headaches and backaches during her period. Her discharges were so heavy that she had to wear adult diapers.

She started to use BeLight in August 2022. After a month, her menstruation returned to normal, lasting 4 to 5 days per cycle. Her headaches and backaches are gone too.

Chen XiuTao (52 years old) started to experience stroke symptoms in 2017. Once, her blood pressure shot up to almost 200mmHG and she was hospitalized. She almost fell into depression due to her condition.

Because of the high medical expenses in Singapore, she returned to Malaysia to seek treatment. She started taking Chinese medicine as well as acupuncture. At the same time, she developed frequent leg cramps. After 6 months of medications, she saw only slight improvements.

Mdm Chen was introduced to BeLight in December 2022. After 3 months of consistent usage, her leg cramps are gone. Her blood pressure is normal now, and she avoided having a stroke.

Mdm Er was diagnosed with breast cancer in 2020. She underwent surgery, had the lump removed, and was put on medications and chemotherapy.

She showed signs of recovery and stopped taking costly medicines.

In November 2022, her cancer relapsed, and unfortunately, spread to her entire body. She lost her voice and subsequently, in March 2023, her ability to walk.

In April 2023, she sought medical attention

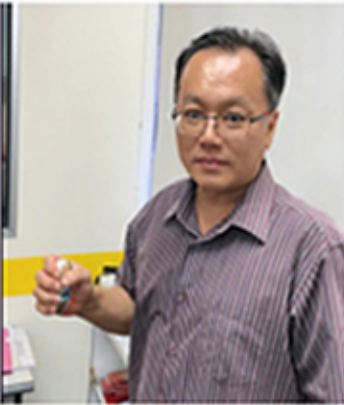

and started Targeted Therapy due to her advanced cancer. At the same time, she started using BeLight to prevent side effects from happening.

As of today, she has won her second battle against cancer.

TESTIMONIALS

Mr Richard
After a routine medical check-up in 2022, Mr Richard was informed that his LDL-Cholesterol was borderline high.

Aside from watching his diet, he started to use BeLight consistently, at least 3 times a day.

After 9 months and a second medical check-up, his LDL-Cholesterol had dropped to a desirable level without the use of any medicine.

Cecilia Cheah had been on medication for high cholesterol for years. Even so, her blood tests still showed Borderline High.

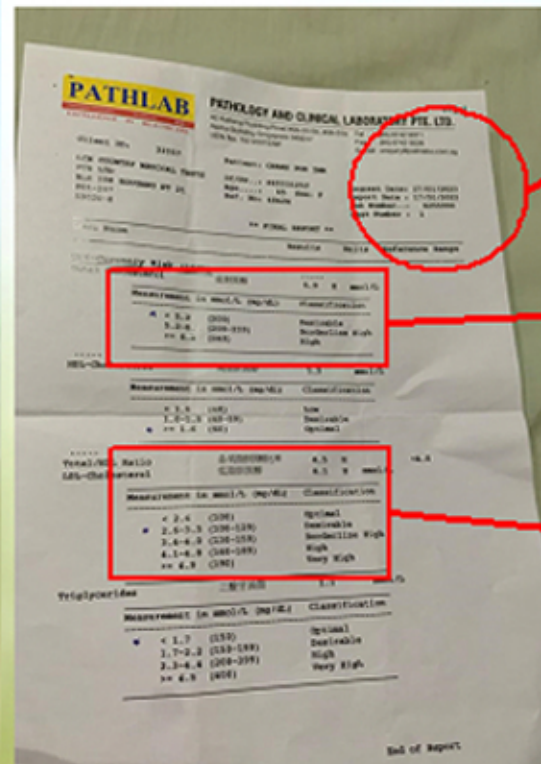

Her previous test report was in January 2023, and the results were undesirable. She was informed by her doctor that her dosage would be increased if the next report showed the same result.

She started to use BeLight in February 2023.

In October 2023, she did another blood test, and her cholesterol level improved significantly.
